EMDI INITIATIVE

Electronic Medical
Documentation
Interoperability

Connecting
Providers to Providers

WHO WE ARE

CMS has initiated the Electronic Medical Documentation Interoperability (EMDI) Initiative with the goal to reduce provider burden, which engages key healthcare stakeholders to participate in pilots to establish secure communication and share medical documentation by using health IT standards and protocols.

ALIGNS WITH

ONC'S 21ST CENTURY CURES ACT

Assist doctors and hospitals in improving quality of care for patients while reducing Provider Burden through Interoperability.

CMS'S PROMOTING INTEROPERABILITY

Incentivize providers to make it easier for patients to obtain their medical records electronically and improve health information exchange to support electronic referral loops.

USE CASES

ORDER

An ordering provider sends an order/referral with other relevant medical documentation to a service provider/supplier.

ADDITIONAL DOCUMENTATION REQUESTS

The service provider/supplier requests additional medical documentation from the ordering provider.

DIGITAL/ELECTRONIC SIGNATURES

The service provider/supplier sends a document with a missing physician signature to the ordering provider and requests the ordering physician to sign, date, and return the document.
